

Sara Taleb-Nezhad

UI/UX Designer & Researcher

Munich, Germany · tezahad.sara@gmail.com · [Portfolio](#) · [LinkedIn](#)

PROFILE

I am a **designer who came from engineering**, and it shows in how I work. Over 5 years I have designed across **medical, automotive, logistics, media, advertising and social platforms**, for consumer apps, mobile products, B2B dashboards, e-commerce and brand identities alike: research and user flows first, then wireframes, high-fidelity UI and interactive prototypes, held together by design systems. Currently completing my **M.Sc. in User Experience Design**, with a **thesis using eye-tracking to prove that simpler interfaces measurably reduce cognitive load**. **AI-powered tools (Claude, ChatGPT, Figma AI) are part of my daily workflow**; I know where they help and where they don't, and I use them for research synthesis, concept exploration, UX copy and quick prototypes. Usability is where I start, never where I stop; my signature is turning a functional flow into one that measurably performs and people genuinely enjoy. I thrive in dynamic, international environments where design craft, evidence-based decisions and real business impact go hand in hand.

EXPERIENCE

UI & Graphic Designer

Nov 2024 – Present

THI Startup Center · Ingolstadt, Germany

- Responsible for the visual identity of the Center of Entrepreneurship, keeping product, web and marketing consistent and on-brand.
- Built a reusable template system of components, patterns and guidelines based on TH Ingolstadt's design system during the university rebrand.
- Design responsive layouts and landing pages for web, e-commerce and campaigns in Figma, Adobe Suite and Canva.
- Use AI tools (Claude, ChatGPT, Figma AI) day to day to draft and refine copy, explore concept variants and speed up production work.
- Work in short iterative cycles with the marketing team: designs go live quickly and are refined based on real usage.

UX Designer & UX Researcher, B2B Product

Mar 2024 – Sep 2024

OpenPack (Klingele), with TH Ingolstadt · Ingolstadt, Germany

- Designed a B2B shift-handover system for corrugated-manufacturing companies, with TH Ingolstadt and OpenPack (Klingele): user research, user flows, wireframes, high-fidelity Figma prototypes and usability testing, bringing consumer-level UI polish to complex data and analytics views.
- The redesign improved task speed and reduced errors; presented results to the industry partner and worked in an international agile team, explaining design decisions to non-design stakeholders.

UI/UX Designer

Aug 2022 – Mar 2024

Sib Sabz, Design Studio · Rasht, Iran

- Designed consumer-facing web and mobile app experiences for multiple clients, from first user flow to high-fidelity, conversion-focused UI.
- Worked across a wide range of industries and formats, including e-commerce, media, advertising, social platforms and brand identities, adapting quickly to each client's users and goals.
- Built visual designs, reusable components and interactive prototypes; worked with developers on handoff and implementation constraints.

Biomedical Engineer & Researcher

Mar 2023 – Oct 2023

Al-Zahra Educational, Medical & Research Center · Rasht, Iran

- Managed and maintained medical devices in the hospital pharmacy and worked daily in the Hospital Information System (HIS); reviewed its interfaces and workflows, identified friction points and proposed redesigns to make critical information faster to access.
- Observed clinical staff using devices and software under time pressure, documenting use errors and workarounds; safe operation depends as much on usability as on hardware, and this shaped my move into human factors and UX.

Biomedical Engineer (Internship)

Mar 2022 – Aug 2022

Zakaria E Kabir · Tehran, Iran

- Tested medical device performance in real-world use, identifying failure points and usability risks: many device "failures" start at the interface between product and user.

Research Assistant, Advanced Mobile Robotics Lab (AMRL)

Feb 2019 – Mar 2020

MRL-AMRL · Qazvin, Iran

- Developed and tested embedded electronics for rescue robots in safety-critical scenarios; programmed microcontrollers in C/AVR, designed circuits in Altium Designer and Proteus.
- First taste of real research work: setting up tests, studying what failed and improving from the results, the same loop I now use in usability testing.

SELECTED PROJECTS

Master's Thesis, In-Vehicle Interface Simplification

Eye-Tracking Study · TH Ingolstadt · Supervisor: Prof. Andreas Riener

- Testing whether simpler in-vehicle interfaces measurably reduce visual demand on the driver: Figma prototypes, a controlled eye-tracking experiment, quantitative gaze analysis and usability testing.

AI-Powered Post-Chemotherapy Support App

ACE² International Innovation Workshop, Gdańsk (with THI)

- Prototyped an AI-powered mobile app for post-chemotherapy recovery in a 5-day international sprint: defined user needs, designed the AI support features, built an interactive Figma prototype and pitched the final concept.

5going, Connected-Vehicle Lab Application

Car2X Lab, TH Ingolstadt

- Led UX/UI end-to-end: user research with engineers and researchers, user flows, wireframes, prototypes and feedback-driven iteration, turning complex lab workflows into an intuitive interface.

Bachelor's Thesis, Pulse Oximeter & SpO₂ Detection Device

Qazvin Islamic Azad University

- Designed and built an Arduino-based pulse oximeter measuring and displaying blood-oxygen saturation; combined hardware, sensors and signal processing.

EDUCATION

M.Sc. User Experience Design

Oct 2023 – Present

TH Ingolstadt · Ingolstadt, Germany · Grade: 1.9

B.Sc. Biomedical Engineering

Sep 2018 – Feb 2022

Qazvin Islamic Azad University · Qazvin, Iran · Grade: 1.7

SKILLS

UI & Visual Design

Typography · Color · Layout · Visual Hierarchy · High-Fidelity UI · Visual Identity · Brand & Corporate Design · Landing Pages · Marketing Assets · Mobile, Responsive & Web Design · 3D Visualization · Presentation Design · Accessibility

Design Systems

Component Libraries · Reusable Components · Patterns & Guidelines · Style Consistency Across Product, Web & Marketing

UX

User Flows · Wireframing · Interactive Prototyping · Information Architecture · Interaction Design · User Research · Usability Testing · Interviews · Concept Validation · Research Repositories · Eye-Tracking · Heuristic Evaluation · Journey Mapping · Personas · Design Thinking

AI in Workflow

Research Synthesis · Concept Exploration · UX Copy · Rapid Prototyping · ChatGPT, Claude & Figma AI · AI-Powered Product Concepts

Tools

Figma · Adobe Photoshop · Illustrator · InDesign · Canva · Miro · Notion · MAXQDA · $\LaTeX$

Technical

HTML/CSS Constraints & Developer Handoff · Python · C/C++ · MATLAB · Arduino

Languages

English (C1) · German (B1) · Persian (Native)
